**Subject:** Willamette River Harbor Superfund Cleanup

The pollutants in the area of the Willamette River designated as a Superfund Cleanup Site have been there for far too long. It is time to clean them up. We need no more studies and no more delays. The cleanup recommended by the EPA falls far short of the cleanup that needs to be done. The remediation work should be based on that recommended by the Portland Audubon Society, Willamette Riverkeeper and other environmental groups. And we need the EPA to begin the cleanup process, NOW!

The companies responsible for the pollution in the Willamette River should pay to clean it up. They profited from the pollution they should not have created.

The people of Portland today, and those who come after us, deserve a clean Willamette River.
